\*The intention is to hedge full or part of the value of the net assets in the reference currency of the sub-fund or the currency exposure of certain (but not necessarily all) assets of the relevant sub-fund into either the reference currency of the currency hedged share class, or into an alternative currency. It is generally intended to carry out such hedging through the use of various derivative financial instruments including, but not limited to over-the-counter currency forward contracts and foreign exchange swap agreements. Profits and losses associated with such hedging transactions are allocated to the applicable currency hedged share class or classes.

The techniques used for share class hedging may include:

- hedging transactions to reduce the effect of fluctuations in the exchange rate between the currency in which the share class is denominated and the reference currency of the relevant sub-fund ("Base Currency Hedging");
- hedging transactions to reduce the effect of fluctuations in the exchange rate between the currency exposure arising from the holdings of the relevant sub-fund and the currency in which the share class is denominated ("Portfolio Hedging at Share-Class Level");
- hedging transactions to reduce the effect of fluctuations in the exchange rate between the currency exposure arising from the holdings of the relevant benchmark and the currency in which the share class is denominated ("Benchmark Hedging at Share-Class Level");

### COVID-19 and Business Continuity Plan

At the end of the first quarter 2020, the world has been confronted with the outbreak of COVID-19. The impact of this on the financial markets has been significant both in terms of bond and equity prices as well as financial market volatility. Stock markets have been under severe pressure, important interest rates moved down as did oil prices. After a volatile second quarter of 2020, the global economy as a whole recovered quite strongly in the third quarter from the depths of the COVID-19-induced recession.

NN IP has an active risk and portfolio management process, where on a daily basis market and liquidity risk are being assessed and where needed portfolio adjustment are made. Besides this, there is continuous monitoring on the compliance with both the prospectus and

## Notes to the financial statements (continued)

regulatory guidelines. Where needed mitigating actions are taken. The current processes are considered to be effective to ensure continued effective portfolio management.

NN IP has activated the Business Continuity Plan “BCP”. The IT infrastructure has been upscaled enabling the majority of staff to work from home having access to all systems. NN IP continues to manage the portfolios under the circumstances and no material negative impact is experienced on our operational control framework. There is no reason the current crisis has any negative impact on the viability of either the fund or the manager.

Although the majority of staff is still working from home we do not experience any material disruptions in our processes. As a result from the COVID-19 pandemic we expect that a combination of working from home and working from the office will become the standard.

### Market developments

NN IP’s portfolio management teams are continuously monitoring and evaluating market developments, asset side liquidity and portfolio flow data, to ensure a timely response to the changing market environment. They do so with support of a team of cross-functional specialists. The team regularly tests the effectiveness of measures in place to manage volatility in transaction costs. They subsequently implement actions to safeguard interests of clients. Currently, the specific COVID-19 monitoring is no longer in place. A period of further volatility in the financial markets relating to COVID-19 cannot be ruled out. Should volatility increase in the future, management will adjust the monitoring activities performed to respond to this as necessary.

## Notes to the financial statements (continued)

### Securities valuation

The value of all assets is determined under the responsibility of the Company's Board of Directors.

The transferable securities admitted to an official listing or to any other regulated market are valued at the last known prices. If these transferable securities are traded on several markets, the valuation is made on the basis of the last known price on the main market on which the transferable securities are listed.

Transferable securities not listed or not traded on a stock exchange or on any other regulated market and transferable securities listed or traded on such a market but whose last known price is not representative, are valued with prudence and in good faith on the basis of their probable realisation value as determined by or under the direction of the Board of Directors of the SICAV.

Money market instruments and other short-term securities in the non-Money Market funds are valued using the straight-line amortisation method provided these instruments or securities have an initial or residual maturity at the time of their purchase by the Company of less than 12 months and if it appears that the last known price on the main market for the security in question cannot be considered as representative of the price of that security.

Investments in investment funds, either listed or not, are valued on the basis of their last available net asset value per share/unit.

The loans are not quoted and are valued by means of a recognized actuarial method.

Bonds (including ABS) are valued clean (excluding interest receivable) except those identified in the securities portfolio of each concerned sub-fund. The ones valued dirty are identified by an asterisk in the portfolio. The last known price used for the bonds is the Bid price.

The fund's valuation methodology for money market instruments in the Money Market funds meet the requirements of money market fund regulation (MMFR) that came into effect as of January 21, 2019. The valuation model determines that the MMF valuation shall be valued on a daily basis. The assets of a MMF shall be valued by using mark-to-market whenever possible.

When using mark-to-market:

- a. the asset of a MMF shall be valued at the more prudent side of bid and offer unless the asset can be closed out at mid-market;
- b. only good quality market data shall be used; such data shall be assessed on the basis of all of the following factors:
  - i. the number and quality of the counterparties;
  - ii. the volume and turnover in the market of the asset of the MMF;
  - iii. the issue size and the portion of the issue that the MMF plans to buy or sell.

Where use of mark-to-market is not possible or the market data is not of sufficient quality, an asset of a MMF shall be valued conservatively by using mark-to-model. The model shall accurately estimate the intrinsic value of the asset of a MMF, based on all of the following up-to-date key factors:

- a. the volume and turnover in the market of that asset;
- b. the issue size and the portion of the issue that the MMF plans to buy or sell;
- c. market risk, interest rate risk, credit risk attached to the asset.

When using mark-to-model, the amortised cost method shall not be used. A MMF shall calculate a NAV per unit or share as the difference between the sum of all assets of the MMF and the sum of all liabilities of the MMF valued in accordance with mark-to-market or mark-to-model, or both, divided by the number of outstanding units or shares of the MMF.

### Financial derivative instruments valuation

The value of all assets is determined under the responsibility of the Company's Board of Directors.

Financial derivative instruments listed on a regulated market are valued at the last available published price applicable at the closing date.

Financial derivative instruments not listed on a regulated market are valued by means of an actuarial method recognised in the market.

Swaps are valued on the basis of their market value, which depends on several parameters (level and volatility of the index, market interest rate, remaining life of the swap).

Swaps are valued clean (excluding interest receivable/payable) except those identified in the financial derivative instruments of each concerned sub-fund.

## Notes to the financial statements (continued)

Net positive fair values of financial derivative instruments are disclosed as assets and net negative fair values as liabilities in the statement of net assets, under the item "Total financial derivative instruments".

Interest to be received on swaps is included in the item "Other assets".

Interest to be paid on swaps is included in the item "Current liabilities".

### Income

Dividends are accounted for on the ex-date, net of withholding tax.

Interest is accrued on a daily basis.

Discounts are accreted and premiums are amortised as adjustments to interest on bonds and other debt instruments.

### 3- SWINGING SINGLE PRICING

A sub-fund may suffer "dilution" of its net asset value per share because the price at which investors subscribe or redeem shares of the sub-fund, does not reflect the dealing and other costs that arise when trading is undertaken by the Investment Manager to accommodate the cash inflows or outflows related to these subscriptions or redemptions.

In order to counter this impact, a Swinging Single Pricing mechanism (SSP) may be applied to compensate expected transaction costs resulting from the difference between capital inflows and outflows. If on any valuation day, the aggregate net transactions in shares of a sub-fund exceed a pre-determined threshold, the net asset value per share may be adjusted upwards or downwards to compensate expected transaction costs related to these net capital inflows or outflows respectively by a pre-determined swing factor. The net inflows and net outflows will be determined by the Board of Directors based on the latest available information at the time of calculation of the net asset value per share.

Such predetermined threshold and swing factors are reviewed on a regular basis and may be adjusted. The maximum Swing Factor is 1.50% of the respective Sub-Fund's Net Asset Value except for Sub-Funds investing in fixed income instruments which may apply a maximum Swing Factor of 3.00%.

In exceptional market circumstances, in the case of large volumes of subscription, redemption or conversion requests that may have an adverse effect on the interests of Shareholders, the Board of Directors may, at its own discretion, authorize a temporary increase of a Swing Factor beyond the maximum Swing Factor. Exceptional market circumstances can be characterized among others as periods of increased market volatility, lack of liquidity, challenges in dealer intermediation, disorderly trading conditions, dislocated markets, disconnect between market pricing and valuations and could be the result of force majeure (acts of war, industrial action, civil unrest or cyber sabotage, among others).

The current levels of thresholds and Swing Factors for each Sub-Fund are disclosed and updated on the website: [www.nnip.com](http://www.nnip.com).

As at March 31, 2021, a swing factor was applied on the following sub-funds:

- NN (L) Euro Credit,
- NN (L) European Real Estate.

The list of sub-funds which have applied the swinging single pricing mechanism through the reporting period ended March 31, 2021 is as follows:

\* for this share class the management fee is not charged to the share class. Instead a specific management fee is levied and collected by the Management Company directly from the shareholders.

In the case where the management fees paid by the investee funds exceed the management fees to be paid by the sub-funds of the SICAV, the balance ("management fees excess") is recorded in the item "Other income" in the statement of operations and changes in net assets.

NN Investment Partners B.V. has entrusted, at its own expense, the management of the different sub-funds to the investment managers listed below:

### 6- FIXED SERVICE FEES

A fixed service fee is charged at the level of the share classes of each sub-fund. The fixed service fee is paid to the Management Company and used by the latter to pay in the name of the Company the administration fees, the depositary fees, the transfer agent fees, the Belgian subscription tax and other on-going operating and administrative expenses billed to the Company.

The fixed service fee is fixed in the sense that the Management Company will bear the excess of any expenses above the annual paid fixed service fee for each share class of each sub-fund.

Conversely, the Management Company will be entitled to retain any amount of service fee charged to the share class which exceeds the actual related expenses incurred by the respective share class.

This fee, calculated on the average net assets of each class of shares, is payable monthly in arrears.

As at March 31, 2021, the effective fixed service fees rates for the active share classes are as follows:

| Sub-funds                              | Fixed service fees rate (p.a.) |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                    |                     |                      |

## 7- OVERLAY FEES

The Management Company may be entitled to receive a uniform Share-Class Overlay Fee of maximum 0.04% which is to be paid from the assets of the applicable Share-Class and based on actual costs. The Share-Class Overlay Fee is accrued at each calculation of the Net Asset Value and is set as a maximum in the sense that the Management Company may decide to lower the Overlay Fee charged to the respective Share-Class if economies of scale will allow.

The Overlay Fee will be applicable to all the Currency Hedged Share-Classes and Duration Hedged Share-Classes. In case of Z and Zz Share-Classes those fees may be specified in the Special Agreement or Fund Management Services Agreement which will be levied and collected by the Management Company directly from the Shareholder and not charged directly to the respective Share-Class.

As at March 31, 2021, the Overlay Fee is 0.021%.

## 8- TRANSACTION COSTS

The sub-funds of the SICAV incurred transaction costs which have been defined as brokerage fees relating to purchases or sales of transferable securities, money market instruments and financial derivative instruments (or other eligible assets traded in by the sub-funds) and/or commissions relating to subscriptions or redemptions of UCITS/UCI shares/units, if applicable.

In case of cross-investments or investment in the shares/units of other UCITS and/or other UCIs that are managed directly or by delegation by the Management Company (the "NNIP funds"), no transaction costs are applicable.

Transaction costs are included in the purchase/sale price of the securities.

For the period ended March 31, 2021, the amount of transaction costs incurred by each sub-fund is detailed in the following table:

**9- SUBSCRIPTION TAX**

The Company is liable in Luxembourg to a subscription tax ("Taxe d'abonnement") of 0.01% per annum of its net assets for all shares restricted to institutional investors and all shares of the money market sub-fund NN (L) Euro Liquidity and of 0.05% per annum of its net assets for all the other shares.

**10- CHANGES IN THE COMPOSITION OF THE SECURITIES PORTFOLIO**

These changes are made available to the shareholders at the depositary bank and at the Company's registered office as well as at the Local Sales offices or Main Client servicing contacts identified in this report. They will also be sent free of charge to anyone who so requests.

**11- INFORMATION TO SHAREHOLDERS**

Under the Belgian Finance Act of December 22, 2003, that came into effect on January 1, 2004, a 0.06% yearly tax was applied on all money originating from Belgium included in the Company at December 31 of the prior year. This tax rate has been increased to 0.07% in 2005, to 0.08% in 2007, to 0.0965% in 2013 and decreased to 0.0925% from 2014 onwards.

The Company has lodged a complaint with the European Commission against the Belgian State for this tax to be recognized as contravening the Community law. That complaint has been rejected by the European Commission. Following another complaint introduced by the Company before the Belgian Courts, the Brussels Court of First Instance has delivered a positive judgment condemning the Belgian State to refund the amounts unduly paid. The Belgian State has, however, appealed against that decision. On November 29, 2018, the Court of Appeals of Brussel rendered its decision. The decision of the Court upheld the judgement of the Brussels Court of First Instance which had ordered the Belgian State to reimburse the Belgian yearly tax levied on the Luxembourg fund. The Belgian State has filed an appeal before the Belgian Supreme Court. The Supreme Court case is currently pending.

## 14- PORTFOLIO TURNOVER RATIO

The Portfolio Turnover Ratio is an indicator of the relevance of the additional costs incurred by a fund when buying and selling investments according to its investment policy.

The Portfolio Turnover Ratio is calculated using the method described below:

$$\text{Turnover} = [(\text{Total 1} - \text{Total 2}) / M] * 100$$

Total 1 = Total securities transactions during the period = X + Y

X= purchases

Y = sales

Total 2 = Total capital transactions during the period = S + R

S = subscriptions

R = redemptions

M = Average Net Assets

The Portfolio Turnover Ratio is expressed as a percentage. The Portfolio Turnover calculation excludes the trades instructed into NN (L) Liquid which are linked to cash facility management.

## 15- SUBSEQUENT EVENTS

Comments:

<sup>(1)</sup> Commitment or VaR approach. When the VaR approach is used to calculate the global exposure, the table indicates whether the Absolute VaR or Relative VaR is used.

<sup>(2)</sup> In accordance with the UCITS regulation, the expected maximum level of leverage is outlined for the Sub-Funds using the VaR approach. The expected maximum level of leverage is expressed as the ratio between the market risk exposure of the Sub-Fund's positions and its net asset value. The ratio is calculated in accordance with the commitment method ("net approach") and the sum of notional method ("gross approach"). While the net approach takes into account netting and hedging arrangements, the gross approach does not take into account such arrangements, hence triggering results that are generally higher and not necessarily representative from an economic exposure point of view. Irrespective of the approach used, the expected maximum level of leverage is an indicator and not a regulatory limit. A Sub-Fund's observed level of leverage may be higher than the expected maximum level as long as it remains in line with its risk profile and complies with its VaR limit. Depending on market movements, the expected maximum level of leverage may vary over time. In case no derivatives positions are included in the portfolio, the base value for the leverage is "0" (i.e. 0%). The leverage ratio aims to approximate the impact of the use of derivatives instruments on the overall market risk of a given Sub-Fund. For a complete picture of the risk profile associated to each Sub-Fund, please refer to the risk profile section disclosed in each Sub-Fund's Factsheet.
